Lusaka, Zambia

MANAGEMENT SKILLS

- Organizing & Decision Making
- Problem Solving & Root Cause
- Analytical & Systematic Thinking
- Effective Communication
- Conflict Management
- Team Management
- Time Management
- Coaching and Mentoring

TECHNICAL COMPETENCES

- Demand Forecasting
- Supply Planning
- Procurement/Sourcing
- Contract Management
- Inventory Management
- Warehouse Management
- Distribution Management
- Logistics Management
- Project Management
- Capacity Planning (RCCP)
- Sales & Operations Planning
- Materials Requirement Planning
- Distribution Replenishment Planning
- Data Analytics

SYSTEM COMPETENCES

- Rapid Response
- Microsoft Office
- Power Hub
- Streamline
- Tableau
- Pronto
- Vena
- SAP

PROFILE SUMMARY

Self-motivated supply chain and sales operations professional with valuable industrial experience focusing on sales, inventory and end-to-end supply chain operations. Results oriented with a proven record of working collaboratively with team members to achieve business targets.

SUCCESSSES

- › Coordinated the implementation of the regional warehouse project at Engie Energy Access (EEA) resulting in warehouse optimization (20% reduction in space), reduced inventory (35% working capital reduction in balance sheet), and reduced lead time (from 6 months to 1 Month).
- › Developed and standardized the Demand policy and sales forecasting validation framework across EEA markets leading to improvement in the quality of the demand forecast (From 60% to 90% forecasting accuracy).
- › Reinforced the S&OP processes for EEA. This resulted in improved business-integrated cycle planning and cross-functional coordination.
- › Coordinated streamline planning system go live for EEA and trained commercial and operations teams on demand, inventory, and report workflow executions in streamline.
- › Coordinated supply chain process startup and SAP ERP go live for British American Tobacco (BAT) Zambia and facilitated user trainings and trouble shooting process and system failures.
- › Managed supplier source change project for BAT Zambia from Kenya to South Africa improving logistics efficiency and optimizing cost— 3 to 1 week lead time reduction and 25% freight cost savings.
- › Negotiated and implemented a Vendor Managed Inventory (VMI) System for locally sourced production materials at BAT Zambia leading to inventory optimization and 40% overall inventory carrying cost reduction.
- › Coordinated the new product introduction (NPI) project from Safari to Rothmans brands at BAT Zambia without product stock outs risk in the market and Zero write-offs on production raw materials.

AWARDS

- 2023 BAT ETHOS – BAT Zambia Exemplary Award
- 2015 Best Graduating Student – Copperbelt University Senate Award
- 2013 Best Performing Student – Copperbelt University School Award

EDUCATIONAL BACKGROUND

Master of Science in Operations, Projects & Supply Chain Management

May 2023

University of Zambia (UNZA), Lusaka, Zambia

Bachelor of Science in Production Management

July 2015

Copperbelt University (CBU), Kitwe, Zambia

Certificate in KAIZEN Consultancy

December 2016

Kaizen Institute of Zambia (KIZ), Lusaka, Zambia

Grade 12 School Certificate

December 2009

Munali Boys Secondary School, Lusaka, Zambia

EMPLOYMENT HISTORY

**Engie Energy
Access**

*August 2023
to
Date*

Global Sales & Operations Planning (S&OP) Manager

Benin, Nigeria, Cote d'Ivoire, Kenya, Rwanda, Uganda, Tanzania, Mozambique & Zambia

Demand Management: Pre-S&OP

- Forecasting customer demand quantitatively and qualitatively
- Validating forecasted demand in terms of seasonality conformance, cycle changes, forecast baseline deviation, forecast growth, and deviation from budget
- Forecasting customer demand based on revenue, price, and exchange rate parameters
- Monitoring and tracking forecast accuracy and forecast bias
- Monitoring and recording all internal and external drivers of under/over forecast
- Forecasting new product introductions (NPIs) through market pilot testing and developing ramp-up plans
- Forecasting end-of-life products (EOL) and developing ramp-down plans

Supply Management: Pre-S&OP

- Aligning inventory replenishment based on a firm demand plan
- Assessing and highlighting supply constraints to fulfill the demand plan
- Proposing contingency measures such as reshuffles from other markets to meet demand shortfalls
- Highlighting stock outs/overstocks as a result of demand changes
- Submitted replenishment plan to suppliers and capturing supplier capacity issues to meet supply plans
- Tracking pipeline stock and assessing coverage to fulfill forecasted demand
- Initiating urgent supply requests with suppliers to meet sudden demand increase
- Maintaining enough buffer stocks for products with inconsistent demand increase

Demand and Supply Review: Pre-S&OP

- Reconciling demand and supply plan to develop a more realistic and achievable integrated business plan
- Proposing replenishment orders of inventory based on the reconciled demand and supply plan
- Quantifying in financial terms the inventory order value of the reconciled demand and supply plan
- Assessing the cash flow position of the business to meet the proposed inventory order value
- Reviewing stock positions across all markets and proposing reshuffles to mitigate stock outs and over-stocks
- Reviewing payment schedules and outstanding balances owed to suppliers
- Reviewing and aligning integrated business plans with pipeline shipments from global suppliers

Executive S&OP review

- Reviewing demand and supply plans with the executive committee
- Highlighting operational drivers for under/over forecast forecasting and supply constraints
- Providing updates on demand and supply trends to the executive committee
- Reporting deviations of the integrated business plan from budgeted revenue and EBIT targets
- Communicating measures to improve forecast accuracy from demand and delivery from supply
- Presenting the integrated demand and supply plan to the executive committee for approval or disapproval

S&OP Management

- Leading cross-functional teams in commercial and operation functions across all markets
- Establishing S&OP cycle calendars, schedules and presiding over meetings
- Evaluating performance of the S&OP meetings and implementing measures for underperformance
- Collaborating with country functional heads in operations and commercial to execute S&OP cycle plans
- Managing regional S&OP leads and providing guidance, coaching and training
- Training cross-functional teams on the S&OP process and guiding process workflow execution

Supply Chain Executive Zambia

Demand Execution

- Overseeing demand planning and management processes for new and existing products
- Developing effective forecast models based on industry trends and demand patterns
- Scheduling monthly forecast and demand review meetings with all key stakeholders as required
- Working with customers, sales team, and supply chain team to improve forecast accuracy
- Proposing and implementing solutions to improve demand forecast accuracy
- Monitoring and reporting changes in sales forecasts
- Addressing demand-related issues in a timely and cost-effective manner

Supply Execution

- Planning supply plans to align with demand requirements
- Projecting forward-looking stock positions and financial implications
- Administering SAP & RR Enterprise Resource Planning data for manufacturing
- Interpreting and executing the material requirement plans (MRPs)
- Analyzing MRP outputs to determine appropriate replenishment strategies and safety stock levels
- Setting preferred stock levels to prevent excess inventory and shortages
- Monitor weekly and monthly production plans of semi-finished and finished products
- Preparing detailed reports relating to MRP, back orders, and schedules
- Administering SAP, GST & RR Enterprise Resource Planning data
- Developing and monitoring internal and external supply chain key performance indicators

Warehouse Execution

- Managing the scheduling of the warehouse activity plans with the aim of aligning resources (employees and assets) with the various inbound, outbound, and on-site activities performed by the Warehouse
- Overseeing yard management of vehicle access and departure from the site by ensuring that only authorized vehicles are permitted entry and that loaded vehicles that leave the site carry the correct paperwork
- Managing the physical receipts of goods to inventory and updating inventory records in SAP ERP
- Managing the put-away process of received goods by overseeing the movement of stock from a goods-in marshaling bay to a storage location in the warehouse and updating the SAP ERP (and manual) inventory record
- Overseeing the picking of stock in the warehouse as requested by customer orders through the determination of the optimum picking approach to maximize warehouse operational efficiency while meeting timeframe obligations
- Managing the dispatch of goods to shipping vehicles through vehicle loading, goods issues, printing appropriate documentation, and sealing the vehicle
- Maintaining inventory record accuracy by monitoring inventory record accuracy and making corrections after approval
- Managing the successful execution of weekly cycle counts, monthly and year-end wall-to-wall stock counts
- Implementing FIFO & FEFO rules and warehousing housekeeping standards including 5s organization

Logistics Execution

- Managing the creation of tactical logistics Plans based on logistics requirements, storage, and cost factors
- Overseeing management of transport requirements (move instructions) through procurement, deployment, and ad-hoc requests
- Scheduling transport orders into delivery loads to fulfill delivery requirements at minimum cost
- Overseeing the logistics bookings by contacting various 3PLs required to execute the movement
- Coordinating the documentation and tax management for imported inventory
- Monitoring the customs clearance payments for all imports and escalating issues to the legal department
- Ensuring compliance with shipment documents for all importations
- Monitoring and reporting performance of 3PLs and using the information for improving the logistics distribution process

**British American
Tobacco**

*January 2023
to
September 2023*

- Ensuring timely submission of proof of deliveries (PODs) by 3PLs to enable reconciliations and payments for deliveries
- Quarterly and monthly collaboration meetings with 3PLs to review major successes and challenges
- Tracking and monitoring distribution performance indicators for in-market sale

Supply Chain Manager *Zambia*

Sales and Operations Planning

- Facilitating the monthly S&OP process by balancing the end-to-end demand and supply plan
- Preparing the executive S&OP deck and relevant demand and supply scenarios to aid decision-making
- Building collaborative cross-functional relationships with S&OP stakeholders
- Providing leadership to help drive positive results for the S&OP process
- Engaging with commercial function to improve demand forecast accuracy

Procurement and Contract Management

- Performing procurement needs assessments and developing procurement plans
- Carrying out market search of vendors and selection in line with the business vendor selection criteria
- Preparing tender award documents and contracts for selected suppliers
- Negotiating contract terms in terms of pricing, delivery, payment schedules, and quality
- Managing the procure-to-pay (P2P) cycle on all direct production materials and spare part items
- Conducting vendor reviews and assessing compliance with contractual terms
- Implementing service level agreements and tracking performance metrics
- Establishing and implementing controls to reduce unbudgeted procurement spending
- Evaluating supplier risks and developing contingency plans for strategic procurements

Supplier Management

- Managing relationships with strategic and critical suppliers of raw materials and spare parts
- Liaising with suppliers and resolving all non-compliant contractual issues
- Conducting monthly and quarterly performance reviews and aligning on areas of improvement
- Managing the extended S&OP with suppliers and aligning on-demand and supply requirements
- Negotiating with suppliers on flexibility and response to urgent demand and supply requirements

Inventory & Warehouse Management

- Optimizing inventory and adhering to the business stockholding policy and replenishment strategies
- Maintaining no stockouts, overstocks and managing slow-moving (SLOBs) stock items
- Overseeing the inbound and outbound warehousing process workflow flows
- Managing the warehouse activity plan and resource allocation to optimize warehouse costs
- Managing inventory cycle counts, wall-to-wall counts, and stock adjustments in line with inventory policy
- Implementing good warehousing practices in line with business and industry standards

Logistics Management

- Inbound and outbound order transport requirements planning with logistics service providers
- Scheduling shipment arrivals and dispatches to avoid shipment influx at border entry points and onsite
- Optimizing transportation through shipment consolidation and route planning
- Regularly tracking shipment status for both inbound and outbound deliveries
- Overseeing the clearing of inbound and ensuring shipments comply with customs requirements
- Liaising with transport to ensure on-time and in-full deliveries for both inbound and outbound shipments
- Enforcing compliance of logistics providers to transport service level agreements

People Management

- Ensuring and enabling an inclusive culture
- Managing performance against set targets and competencies
- Setting performance objectives and performance reviews
- Conducting career discussions and establishing development plans
- Training and coaching supply chain teams to fulfill performance objectives
- Implementing actions from employee work culture surveys
- Implementing weekly direction-setting and feedback sessions

Environmental Health and Safety Management

- Identifying workplace safety hazards and reporting unsafe conditions
- Ensuring no lost time injuries (LTIs)

**British American
Tobacco**

*January 2021
to
December 2021*

- Maintaining good housekeeping
- Raising non – non-compliance reports for all non–compliant stock items in the warehouse
- Implementing actions from the EHS roadmap plan
- Attending all safety toolbox meetings

**British
American
Tobacco**

*September 2017
to
December 2020*

Production, Scheduling & Raw Materials Planner *Zambia*

Production Planning and Management

- Creating Long Term Production Plans based on Demand Forecast – 24 months rolling
- Creating Rough Cut Capacity Plan (RCCP) based on production capacity– 24 months rolling
- Creating master production schedules (MPS) of family and individual products – 24 months rolling
- Short–term scheduling in monthly, weekly, and daily buckets of planned production volumes
- Analyzing and identifying capacity and supply chain risks likely to impact the master production schedule
- Maintenance of accurate production planning parameters in master data (SAP – System)
- Daily Production order creation to enable continuous running of the factory
- Manpower planning /Labor crewing and allocation/assignment to production machines
- Closing production schedules and reconciling actual production against planned production
- Populating and sharing daily production reports with all business stakeholders

Raw Materials Planning and Management

- Generating raw material requirements based on an approved production plan
- Projecting Stock levels of raw materials and identifying future stockouts/overstocks
- Monthly review of raw material supply position and potential disruptions with suppliers
- Ordering raw materials in alignment with planned production volumes and demand forecast
- Optimizing material stock levels through adherence to the stock holding policy
- Minimizing material waste generation through tracking usages, storage, and quality parameters
- Maintenance of material data safety records to ensure compliance with EHS and regulatory agencies
- Tracking slow–moving materials (SLOBs) and initiating inter-country reshuffles to consume SLOBs

Finished and Semi-Finished Goods Planning and Management

- Maintaining desired inventory levels including safety stock levels to ensure product availability in the market
- Projecting Inventory levels based on forecast regularly to achieve desired corporate inventory turn targets
- Carrying routine cycle counts in the warehouse and reconciling physical and system balances
- Monthly shipment planning of imported finished products based on demand forecast and stock levels
- Distribution replenishment planning of finished goods across distribution centers
- Managing semi-finished goods buffer stocks for bottleneck production processes
- Implementing phase–off and phase–in plans for end–of–life (EOLs) and new production Introductions (NPIs)

**Robust Trailers
&
Bodies**

*February 2017
to
August 2017*

Kaizen Consultant *Zambia*

- Staff KAIZEN methodology training
- 5S and visual management implementation
- 7 Workshop waste identification and counter measure implementation
- Quality Control Circle Team management
- Problem-solving process
- Quality Management and Analysis using Quality Control Tools
- Implementation of PDCA management circle
- Analysis of Workshop Efficiency through Work Sampling
- Root cause analysis (5 – Why)
- Counter measure development using 5W1H action plan
- Value stream mapping (VSM) deployment

February 2014
to
November 2016

Warehouse Administrator *Zambia*

Inbound Workflow Management

- Receiving stock items for both local and international shipments
- Inspecting delivered stock items and raising Inaccuracy Reports (IR)
- Coding stock items and electronically receiving in the system (Pronto)
- Put away (binning) stock items to respective bin locations
- Receipting and processing invoices to facilitate supplier payments

Stock Management

- Weekly cycle counts of physical stock items and reconciliations of variances
- Monthly inventory count and stock adjustments in Pronto
- Monitoring stock levels against stock out/overstock/expiry risks
- Placing order requirements and facilitating purchase order preparations

General Warehouse Management

- Implementing 5S principles and good warehouse-keeping practices
- Observing safety rules and ensuring safety equipment is available at times
- Regular inspecting the condition of safety equipment and raising safety non-compliance reports
- Hazard identification and reporting all hazards observed and recorded
- Chairing daily safety talks/toolbox meetings
- Planning and scheduling routine maintenance of material handling equipment

Outbound Workflow Management

- Picking stock items from bin locations in line with end-user picking slips
- Implementing and ensuring compliance with warehouse picking standards (FIFO, FEFO, LIFO)
- Packing and consolidating picked stock items to optimize transportation
- Planning and scheduling dispatches of stock items based on end-user demand requests
- Loading and shipping stock items to end-users

Supply Chain Intern *Zambia*

Zambian Breweries

June 2013
to
December 2013

On job training in:

- Inventory replenishment and optimization strategies
- Production capacity planning and productivity measurement
- Production Planning & Scheduling
- Warehousing and Logistics
- Health & Safety
