WORKING EXPERIENCE

CURRENT RENEWABLES ENGINEERING INC.

California, USA

Electrical Consultant Engineer

July, 2023

- My daily duties include electrical analysis for residential roof mounted solar project, Reviewing all available information required to provide an electrical evaluation of the building's interconnection. Updating projects revised after the initial delivery, as-built project documentation and other rework.
- Determining the design criteria & loads using both in-house cloud-based and third-party platform tools. Using site survey to evaluate the condition of the building to determine allowable additional ampacity for the building's over-current protection devices and other related technical subjects.
- Communicating with customers to advise on their projects in terms of corresponding energy consumption, components and materials to be used for safety and efficiency of the system, etc.

BBOX GROUP

Kigali, Rwanda

Sourcing Specialist

August 2021 – February 2023

- Leading different LPG & Solar components/appliances sourcing projects; locally, in Africa, Europe, China & in India
- I have identified different potential suppliers/manufacturers for LPG appliances & accessories and enriched a pool of suppliers for different goods/devices such as cylinders, stoves + associated accessories and other different technical products.
- Identifying contractors, supplier/vendor for LPG bulk, appliances and maintain good relationship with all stakeholders.
- Keeping records/archiving and organizing meetings with suppliers as well as contracts management and renewing.
- Keep market price update with suppliers and strategic price negotiation to secure the profitable deals for the firm.
- Develop safety LPG use for efficiency and training technicians and sales people to keep customers satisfied with full support in case needed.
- I have developed a design for refilling station and identified different contractors from Europe (in Turkey, France and Netherlands)
- I have assisted on different products sizing/designing of solar systems and ensured the suppliers deliver the goods meeting the requirements as per company standards.

NETIS RWANDA Ltd

Kigali Rwanda

SHERQ Officer

April to August 2021

- Inspect, identify & analyze all risks statistics from the company, and recommend intervention strategies for safe operations.
- Risk assessments flow up to make sure all identified risks are successfully corrected and ensure quality, safety, health, security, environmental & risk management systems are well defined.
- Undertake and apply risk assessments for hazards prevention, identifying a non-

conformance and possible non-conformances at workplace, to manage the potential threats towards staff and business operations and put in place the preventive measures and handle security incidents.

- Managing the corrective and preventive action through to successful implementation, advising on preventative and remedial actions to eliminate/minimize safety hazards.
- Analyzing risks, accidents, incidents, dangerous occurrences, and other safety matters, vehicles tracking and evaluation in terms of qualitative service, safety, safe environment, health, utilities and facilities management.
