**To RUBIS ENERGIE Recruitment Team
France**

Subject: Apprenticeship - IFP School

Dear Sir/Madam,

After a Master's degree in Petroleum Engineering with a major in Oil Production from the Ecole Nationale Supérieure Polytechnique (Marien NGOUABI University, Brazzaville – Congo), and as part of my training, I did an internship as a Cost Estimation Assistant for Totalenergies E&P Congo (Project Control Department, of the Engineering Works and Subsea Projects Division). My position now is Study Manager Assistant, in the Engineering and Commissioning Department.

My personal project is to evolve in the context of energy transition, precisely in designing and operating of industrial process, as well as supplying innovative solutions which reduce the impact on the climate and environment. That is why I am applying for RUBIS ENERGIE Sponsoring Program, in order to join the Master's degree Program "Energies et Produits" at IFP School and then put into practice all the skills gained at the service of RUBIS ENERGIE, along with supplying innovative solutions in technical challenges and problem-solving linked to projects lead by RUBIS ENERGIE.

My different experiences and those skills I gained, allowed me to apprehend the professional world, to have basic notions in project management and petroleum field, to be well trained in the use of basic computer programs, to be in contact with a varied public and to assert my relational and professional ease.

I strongly wish to be counted among the future members of the energy transition at RUBIS ENERGIE, in order to contribute to the development of the company, along with tackling various challenges linked to the development of projects and operations, help RUBIS ENERGIE to be more innovative across its various projects and activities, then learn and gain professional experience as well strong technical skills for my career. So, I will be able to put at your disposal my dynamism, my availability, my team spirit, my capacity of adaptation which helps me to be familiar easily in all the environments of work, as well as my open mindedness, relational qualities in front of the missions which will be entrusted to me, and I will also put a point of honor to respect the rules in force as regards health, safety and environment.

I look forward to hearing from you.

Yours sincerely.

Félix Delphin LOCKO MAMBOU
