Profile

Tender Manager with a 3-year track record in creating successful Data Centers projects. Skilled in team coordination, securing high-value projects for reputable organizations. Seeking a challenging role in the Data Centers industry to leverage expertise for business growth and sustainable data storage solutions.

Work Experience

Tender Manager for Data Center Sector Schneider Electric

📅 08/2023 📍 RUEIL-MALMAISON, FRANCE

- Leading a team of tender specialists in efficiently preparing and submitting complex documents to bid for major Data Centers projects, meeting all requirements and deadlines.
- Implementing tools to streamline the tender process, substantially reducing bid preparation time.
- Collaborating with technical experts, to deliver optimal Data Center solutions.
- Negotiating contracts with suppliers and clients.
- Proposing suitable client solutions while maintaining a reasonable sales margin.

Solution Architect for Data Centers Schneider Electric

📅 08/2021 – 08/2023 📍 HAMBURG, GERMANY

- Conducted Data Center audits and simulations to assess Power Utilization Efficiency (PUE) and advised buyers on investments for new facilities.
- Designed and implemented scalable Data Center solutions, integrating electrical and cooling systems with virtualization technologies to reduce infrastructure expenses.
- Collaborated with stakeholders to establish business requirements, leading to a Data Center strategy aligned with objectives and industry standards.
- Offered expert guidance on Data Center architecture and emerging technologies, fostering innovation and adaptation to industry trends.

Avionics System Developer (VIE) Airbus

📅 01/2020 – 08/2021 📍 HAMBURG, GERMANY

- Contributed to designing and implementing avionics software solutions for Automated Distress Detection systems in A320, A330, and Beluga aircraft.
- Worked with cross-functional teams to prioritize system requirements, leading to development and integration of avionics systems within project deadlines.
- Conducted comprehensive testing and debugging of avionics software, resolving issues to minimize system failures.
- Led the development and documentation of design specifications and system architecture, ensuring compliance with industry standards and regulations, and facilitating communication with stakeholders.
